

PRECISION STAMPING

CUSTOM, ENGINEERED STAMPED COMPONENTS

FROM SHORT RUNS TO MILLIONS OF PIECES PER YEAR, WE HAVE YOU COVERED IN THE FOLLOWING CATEGORIES:

- ✓ PRECISION METAL BLANKING & BENDING
- ✓ PROGRESSIVE DIES
- ✓ MULTI-SLIDE MACHINES
- ✓ DEEP DRAW DIES
- ✓ TRANSFER PRESS OPERATIONS
- ✓ WIRE FORMING TOOLS
- ✓ ASSEMBLIES

WHY CHOOSE MECHANICAL POWER?

WE WORK WITH MULTIPLE MANUFACTURING PARTNERS ALL OVER THE WORLD. OUR GLOBAL NETWORK IS CAPABLE OF MAKING A WIDE RANGE OF CUSTOM, ENGINEERED STAMPED COMPONENTS.

We've teamed up with a diverse array of Precision Stamping manufacturers all over the world located in the USA, Taiwan, China and India. The factories we utilize range from ISO certified to IATF/TS certified. One area we like to add value for our customers is by providing them assemblies containing stampings, fasteners, plastic, etc.

We have a versatile range in tonnage from 30 tons to 1500 tons. In terms of surface finish, we can supply heat treated, finished parts in e-coating, zinc plating, nickel plating, chrome plating, brass plating, powder coating, high quality polishing, anodized and beyond.

Our suppliers and their secondary operations have high-capacity metal finishing: cleaning, deburring and polishing. Welding, tapping, grinding and threading are other capabilities across our manufacturing base.

Materials range from various grades of stainless steel to cold-rolled steel, hot-rolled steel, copper, brass and aluminum amongst others. Our manufacturers have capability to develop progressive dies and tooling, compound dies, pierce and cut dies, bend and form dies, and draw dies.

Whether it is specialty washers and machinery bushings, brackets or mounting hardware, fasteners, shims or spacers to custom made stampings with value-add operations, our versatile line of manufacturing partners can make your custom, engineered components to print on-time, every time.
